Textiles—Tests for colour fastness—

Colour fastness to water

1 Scope

This Standard specifies a method for determining the resistance of the colour of textiles of all kinds and in all forms to immersion in water.

2 Normative References

The articles contained in the following documents have become this standard when they are quoted herein. For the dated documents so quoted, all the modifications or revisions made thereafter shall not be applicable to this Standard. For the undated documents so quoted, the latest editions shall be applicable to this Standard.

3 Principle

A specimen of the textile in contact with one or two specified adjacent fabrics is immersed in water, drained and placed between two plates under a specified pressure in a test device. The specimen and the adjacent fabric (s) are dried. The change in colour of the specimen and the straining of the adjacent fabric (s) are assessed by comparison with the grey scales.
