Annex D (Informative) Transfer correction	35
Annex E (Informative) Determination of coupling transfer correction	38

Foreword

GB/T 7233 *Steel castings—Ultrasonic examination* is divided into two parts:

- Part 1: Steel castings for general purposes;
- Part 2: Steel castings for highly stressed components.

This is Part 2 of GB/T 7233, corresponding to ISO 4992-2: 2006 *Steel castings — Ultrasonic examination —Part 2: Steel castings for highly stressed components*.

This Standard is revision of ISO 4992-2: 2006, standard structure and technical contents are identical to ISO 4992-2: 2006. Comparison with ISO 4992-2: 2006, there are some changes of this Part are as follows:

- Changed the formatting according to Chinese habit;
- Changed the formulation of International standards to national standards to be applied;
- Replaced the comma “,” by decimal point “.”;
- Added the dimension of defects on measurement wall thickness direction in Fig.6;
- Added the transfer correction in annex D;
- Added the determination of coupling transfer correction in annex E.

This Part will replace corresponding parts of GB/T 7233-1987 *Methods for ultrasonic testing and for specifying quality levels of steel castings*.

Comparison with GB/T 7233-1987, main changes of this Part are as follows:

- Changed the scope of application of standard (see Clause 1);
- Added the order information (see 4.1);
- Changed the quality level requirements (see 4.3);
- Changed the examination methods;
- Added the new annex A, B, C, D and E, deleted annex A, B and C in original standard on

1987.

Annex A of this Part is normative, B, C, D and E is informative.

This Part is proposed by National Standardization Committee.

This Part is under the jurisdiction of National Technical Committee 54 on Casting of Standardization Administration of China

Draft units of this Part: Shenyang Casting Research Institute, Shenyang Fan Cooperation and Shenyang North Heavy Industries.

Chief drafters of this Part: Sun Chungui, Zhang Zhaoqian, Qi Xing, Li Lengxi, Wang Lihua and Li Xingjie.

This standard replaces the following historical editions issued:

— GB/T 7233-1987

Steel castings – Ultrasonic examination –

Part 2: Steel castings for highly stressed components

1 Scope

This part of GB/T 7233 specifies the requirements for the ultrasonic examination of steel castings (with non-Austenite structure) for highly stressed components, and the methods for determining internal discontinuities by the pulse echo technique

This part of GB/T 7233 applies to the ultrasonic examination of steel castings which have usually received a grain-refining heat treatment and which have wall thicknesses up to and including 600 mm. For greater wall thicknesses, special agreements apply with respect to the test procedure and recording levels.

This part of GB/T 7233 does not apply to austenitic steels and joint welds.

2 Normative references

The provisions contained in the following document have become the provisions of this Part of GB/T 7233 when they are cited herein. The dated reference documents, including their list of modifications made thereafter (excluding corrections) or modified versions, shall not be applicable to this Specification. But, all parties who have concluded agreements based on this Specification are encouraged to study on the possibility to implement the latest version of these documents. Of the undated reference documents, their latest version shall be applicable to this standard.

JB/T 10061 Practice for evaluating performance characteristics of A scope ultrasonic pulse - Echo testing systems

3 Terms and definitions

For the purposes of this Part, the terms and definitions given in GB/T 12604.1, and the following, apply.

3.1

reference discontinuity echo size

smallest indication to be recorded during the assessment phase of an ultrasonic examination, usually expressed as an equivalent flat-bottomed hole diameter

3.2

point discontinuity

discontinuity, the dimensions of which are smaller than or equal to the sound-beam width

NOTE Dimensions in this part relate to length, width and/or dimension in the through-wall direction.
