10.3 Field testing.....	错误！未定义书签。
10.4 The analysis and detection of the measuring data.....	错误！未定义书签。
Appendix A The test for inner force of pile body.....	错误！未定义书签。
Annex B Treatment on concrete pile head .....	错误！未定义书签。
Appendix C The record of the static load test .....	错误！未定义书签。
Appendix D Record table of coring method .....	错误！未定义书签。
Appendix E The machining and measure of coring sample.....	错误！未定义书签。
Annex F Assembling of sensor for high strain dynamic testing .....	错误！未定义书签。
Appendix G Test piling and piling monitor .....	错误！未定义书签。
G.1 Test piling .....	错误！未定义书签。
G.2 The monitor of the hammer stress of the pile body .....	错误！未定义书签。
G.3 The monitor of the hammering energy .....	错误！未定义书签。
Appendix H The burial point of the sonic test.....	错误！未定义书签。

## **1 General principles**

- 1.0.1 This code has been formulated to ensure the testing quality of foundation piles and unify their testing methods, in order to provide reliable basis for the design, construction and acceptance and enable the foundation pile testing work to meet the requirements in the respects of safety and suitability, advanced technology, accurate data and correct evaluation.
- 1.0.2 This code is applicable to the testing and evaluation of the bearing capacity of the foundation piles for building engineering and the pile integrity.
- 1.0.3 The foundation pile testing methods shall be selected and matched reasonably according to the feature and range of application of each testing method, at the same time taking such factors as geological conditions, pile type, reliability of construction quality and requirements for use into consideration. The testing results of foundation piles shall be analyzed and judged combining these factors.
- 1.0.4 In addition to this code, the quality testing of foundation piles for building engineering shall also conform to the specifications of the current national mandatory standards concerned.
