Emission Standard for Odor Pollutants

GB 14554-1993
Replace GBJ 4-73¹⁾

In order to implement the *Air Pollution Control Law of the People's Republic of China*, control the pollution to the atmosphere by odor pollutants, protect and improve the environment, we hereby formulate this Standard.

1 Subject Content and Applicable Scope

1.1 Subject content

This Standard specifies the one-time emission limits of eight kinds of odor pollutants, odor concentration limits of composite odorants and concentration limits of unauthorized emission sources in factories.

1.2 Applicable scope

This Standard is applicable to emissions management of all units and garbage dumps across the country discharging odors to the atmosphere, and environmental impact evaluation, design, final acceptance and emissions management after completion of construction projects.

2 Normative References

GB 3095 Air environment quality Standard

GB 12348 Industrial enterprise factory noise Standard

GB/T 14675 Air quality Determination of odor-Triangle odor bag method

GB/T 14676 Air quality Determination of trimethylamine-Gas chromatography

GB/T 14677 Air quality Determination of toluene, dimethyl benzene , and styrene - Gas chromatography

GB/T 14678 Air quality Determination of hydrogen sulfide, methyl sulfhydrate, dimethyl sulfide, and methyl disulfide - Gas chromatography

GB/T 14679 Air quality Determination of ammonia-sodium hypochlorite-salicylic acid spectrophotometric method

GB/T 14680 Air quality Determination of carbon disulphide – diethylamine spectrophotometric method

3 Terms

3.1 Odor pollutants

All gaseous matters stimulating the organ of smell, inducing uncomfortable feeling and detrimental to the living environment

3.2 Odor concentration

It means the extension rate required for the odor (including off flavor) to be diluted exactly to odorless.

3.3 Unauthorized emission source

¹⁾Note: 1) This Standard substitutes for the part for hydrogen disulfide and carbon disulphide index values in Standard GBJ 4-73.
