National food safety standard

Good manufacturing practice for formulated foods for special medical purposes

1. Scope

This Standard specifies the basic requirements and management rules for sites, facilities, personnel of raw materials purchase, processing, packaging, storage, transportation and other sections in the production of formulated foods for special medical purposes.

This Standard applies to production enterprises of formulated foods for special medical purposes (including infant formulated foods for special medical purposes).

2. Terms and definitions

The terms and definitions defined in GB 14881 *National food safety standard General hygienic regulation for food production* and following terms and definitions apply to this Standard.

2.1 Formulated foods for special medical purposes

For formulated foods specially processed and prepared to meet special needs for nutrient or food of groups with limited food intake, digestion and absorption disorders, metabolic disturbance or in the state of specific diseases, such products should be ate alone or combined with other food under the guidance of a doctor or a clinical dietitian. Formulated foods for special medical purposes should be based on research results of medicine and (or) nutriology and be scientifically validated for safety and clinical applications (effects).

2.2 Cleaning work area

The work areas required high cleanliness, such as procedures and bottling zones in which liquid products contact with the air environment (including weighing, filling), workshops with exposed powdery products and workshops for storage, filling and inner packed of to-be-packaged semi-finished products.

2.3 Quasi-cleaning work area

The work areas required a lower cleanliness than cleaning work areas, such as pre-treatment workshops of raw materials.

2.4 Commonly work area
